

Secure Networks

Desktop Integration Services

UAV Communications Networking Services delivers full desktop support services to help clients improve network performance, reduce their costs of ownership and reduce frustrations with technology. Our services are built with a structured, yet flexible methodology that helps us customize and manage user and computer settings efficiently. Our work group managers and system administrators provide the measured support to keep the network running efficiently and appropriately.

LAN/WAN Operation and Management

UAV Comm experience includes operating and maintaining LANs and WANs, both domestically and overseas. Also, we deliver 24x7 help desk support, on-site and remotely, for network management, network engineering, office automation, SNMP management using HP Openview and network administration.

Network Architecture Analysis, Design & Installation

Across government and industry, UAV Comm has built a solid reputation for our network analysis, design, and configuration management capabilities. Our engineers build within budget and on-time and we deliver what is required to get the job done.

Information Assurance

For UAV Comm, network security is a top priority. We can develop a Security Program to meet a customer's specific needs. We can provide certification and accreditation (C&A) support (DITSCAP or DCID 6/3) to Air Force, Navy, Army and other Federal Agencies. We are proficient in the numerous C&A processes – from unclassified to Sensitive Compartmented Information systems and networks. We also provide Special Security Officer (SSO) personnel support. UAV Comm can help identify security requirements, design architectures and technical solutions, manage the implementation of solutions, test and evaluate capabilities, operate systems, life-cycle sustainment, and help transform/modernize to meet future requirements.

Network Architecture Analysis, Design & Installation

Across government and industry, UAV Comm has built a solid reputation for our network analysis, design, and configuration management capabilities. Our engineers build within budget and on-time and we deliver whatever is required to get the job done.
